LinkedIn (737) 733-0333 Website Github alex.w.kingsland@gmail.com

SKILLS

Languages: Python / Java / Kotlin / JavaScript / HTML / TypeScript / SQL / Go
Libraries & Frameworks: Numpy / Pandas / Matplotlib / Flask / TensorFlow / SciPy / React / Strands
Tools & Technologies: AWS Cloud Stack / REST APIs / Docker / Postgres / Linux / TerraForm / Agentic AI

EDUCATION

Bachelor of Engineering – Software Engineering

September 2016 – April 2020

McMaster University | Hamilton, ON

- Achieving a cumulated **3.8 GPA** on a 4.0 scale, emphasis in **Data Structures & Algorithms** and **Software Design**.
- Received golden key award for students in the faculty of Engineering with a cumulative GPA in top 15% of the faculty.
- **Top Courses:** SE Design III, SE Project Management, Data Structures, Networks, Dynamic Systems, Linear Optimization

WORK EXPERIENCE

AWS – Software Dev Eng II

Sept 2022 – Present

AWS Resilience Hub ([Launch blog](#))

Seattle, WA

- Org took over AWS Resilience Hub service and I was tasked to lead a project to launch an agentic re-envisioned version.
- **Built a POC service** to analyze resilience posture of a customer application, successfully launched as a private beta, earned trust and received resourcing from leadership to publicly launch Next generation of Resilience Hub.
- **Led a team of 10 engineers** to successfully launch Next generation of Resilience hub Q1 2026, currently the service has over 100 unique external customers including large enterprise, and **generates 100k ARR** for the business.
- **Tech Stack:** AWS Cloud Infra, Strands framework, Agentic AI

ARC Zonal Shift / Zonal Autoshift ([Launch blog](#))

Seattle, WA

- Team shipped a highly available service for customers to shift their critical workloads between zonal application replicas.
- Design/Develop resiliency infrastructure focusing on recovery and availability of customer applications, resulting in successful launch and operationalization of a global tier 1 service with a widespread internal and external user base.
- Project lead for integration with other AWS services, drove collaboration between multiple service partners, resulted in successful launch and backfill of zonal shift controls on all AWS Load Balancers .
- **Tech Stack:** Python, AWS[EC2, Load Balancer, Lambda, SQS, DynamoDB, CloudWatch], Docker

Pinwheel – Software Dev Eng I

June 2021 – Sept 2022

Systems Integration - Direct Deposit Switch

NYC, NY

- Designed and implemented data extraction and aggregation systems, utilized these systems in production environments resulting in an increase in customer conversion metrics for direct deposit switch product.
- Responsible for managing and developing internal projects end-to-end, aligned with stakeholders and lead dev teams to deliver these projects on schedule and within budget, created custom onboarding pipelines for Chime and Cashapp.
- **Tech Stack:** Python, AWS Lambda, Datadog, Sentry, React, REST API

PROJECTS

Daily Crossword App – Shopify App Extension

Jan 2023 – Feb 2023

Software Application ([App store](#))

- Developed a shopify app extension to inject a crossword puzzle into a merchants storefront that updates daily.
- LLM powered crossword puzzle generation, fully customizable themes and topics.
- **Tech Stack:** Shopify dev framework, Python, AWS infra, AWS Bedrock

Pathless – Travel Itinerary

Jan 2023 – Feb 2023

Software Application ([Website](#))

- Developed a web app for building community based niche travel itineraries.
- **Tech Stack:** Swift, iOS, AWS infra, Python, MapBox API

HedgeHog – AlgoTrading Platform

March 2021 – July 2022

Software Application

- Developed an investing platform that interfaces brokerages to automate parallelized algorithmic trading.
- Application accumulates specified market data to create optimized historical datasets to back test custom strategies.
- **Tech Stack:** Python, Numpy, Pandas, H5PY, REST, IB API, Questrade API, Dropbox, matplotlib
